Get That Rascally Rabbit!

(Or mole, gopher, woodchuck, shrew, prairie dog, squirrel, vole, etc.!)

When you step outside to view your property, do you see a beautiful yard or a maze stenciled into your lawn? Do you have safety concerns about uneven ground or holes that suddenly appear from nowhere? With so many different types of burrowing animals creating this damage, how can a property owner know which solution is the most effective to treat these problems? The **Crittergetter** will help anyone with these issues to say “goodbye” to the problem of burrowing pests with the only product that can take care of them all!

Most experts agree that fumigants are the most effective way to rid property owners of burrowing rodents. But without hiring a pricey professional to do the job, what options are left for the DIY homeowner or frugal property owner? The **Crittergetter** is that answer!

The **Crittergetter** utilizes the highly effective technique of fumigation by injecting fast moving, burrow-end reaching, 'non-pest specific' carbon monoxide gas into the twisted burrow, reaching the burrows smallest hiding places, and eliminating any pest. The carbon monoxide used by the **Crittergetter** is both convenient and inexpensive because it comes from the readily available exhaust of the owner's car, truck, or mower!

The **Crittergetter** is available in two models: [Original](#) and [Homeowner](#). The Original **Crittergetter** is constructed entirely out of an industrial grade, high temperature hose that is available in various lengths from 25 feet up to 150 feet. The Homeowner **Crittergetter** is constructed of a combination of industrial grade high temperature hose, lightweight plastic hose, and is 50 feet long. Additional 50-foot extensions are available and can be combined to create a **Crittergetter** of 150 feet or more in length. The **Crittergetter** is flexible and lays flat making clean up easy; simply roll it up and store it in away from direct sunlight.

After attaching the **Crittergetter** hose onto the exhaust pipe of any lawn tractor, mower, car, or truck; the **Crittergetter** expands to release a direct flow of carbon monoxide into the burrow opening where the fumigation is required. The burrow type and number of active above ground openings will determine the number of applications required to accomplish the desired results.

The **Crittergetter** has step-by-step directions for set up, length of application, types of infestations, and tips for problematic cases. The [CrittergetterOnline.Com](#) website also provides in-depth information about specific pest habits and solutions for unique problems. Additionally, the **Crittergetter** offers a 100% customer satisfaction guarantee!
